Branch-site Unrestricted Statistical Test for Episodic Diversification results summary

INPUT DATA | [5f45198134c53e423ae6751a](#) | 44 sequences | 561 sites

 Export ▾

BUSTED with synonymous rate variation **found no evidence** (LRT, p-value = $0.478 \geq .05$) of gene-wide episodic diversifying selection in the selected test branches of your phylogeny. Therefore, there is no evidence that any sites have experienced diversifying selection along the test branch(es).

See [here](#) for more information about this method.
Please cite [PMID 25701167](#) if you use this result in a publication, presentation, or other scientific work.

Model fits

Model	log L	#. params	AIC _c	CV(SRV)	Branch set	ω ₁	ω ₂	ω ₃	
Unconstrained model	-6150.5	109	12520.0	0.839	Test	0.01 (94.89%)	0.02 (3.58%)	1.60 (1.53%)	
Constrained model	-6150.6	108	12518.1	0.838	Test	0.00 (90.04%)	0.02 (6.99%)	1.00 (2.97%)	

This table reports a statistical summary of the models fit to the data. Here, **Unconstrained model** refers to the BUSTED alternative model for selection, and **Constrained model** refers to the BUSTED null model for selection.

Model Test Statistics Per Site

CONSTRAINED TEST STATISTIC

-Infinity

OPTIMIZED NULL TEST STATISTIC

Steven Weaver
@stvnwvr

I've started working on a comprehensive benchmarking notebook for HyPhy and started with commonly used methods. If there are any specific benchmarks you'd like to see, let me know and I'll include if reasonable.
